0.1 `put.start`: Set specific starting values for certain parameters

Description

After calling `set.start` to create default starting values, use `put.start` to change starting values for specific parameters or parameter sets.

Usage

```
put.start(start.val, value, terms, eqn)
```

Arguments

`start.val`	the vector of starting values created by `set.start`
`value`	the scalar or vector of replacement starting values
`terms`	the terms output from `model.frame.multiple`
`eqn`	character vector of the parameters for which you would like to replace the default values with `value`

Value

A vector of starting values (of the same length as `start.val`)
